NOTES:

- **“Residential Care Community”** includes assisted living, personal care homes, adult care homes, board care homes, adult foster care, and similar arrangements.
- **Percentages may be undercounted.** The national averages may differ from figures reported in the Alzheimer's Association's *Alzheimer's Disease Facts and Figures* report for a couple of reasons. First, this table reports percentages for all users of long-term care services, irrespective of age; some of the percentages reported in *Facts and Figures* are the percentages of users aged 65 and older. Second, data reported on this table were collected from a survey of providers; some of the *Facts and Figures* percentages are based on an examination of data for individual users. If state-level data were available in the same manner – percentages of those users aged 65 and older based on individual users' data – the state percentages may be significantly higher, particularly for nursing homes.

NOTES:

- **Screening for Cognitive Impairment.** An adult day center or a residential care community is considered to screen for cognitive impairment if the facility reports that it uses a standardized tool to conduct a formal assessment of individuals before or upon admission in order to identify anyone with a cognitive impairment.
- **“Residential Care Community”** includes assisted living, personal care homes, adult care homes, board care homes, adult foster care, and similar arrangements.
